PowerPoint Presentation and this document (both Word and PDF formats) should be present within the GitHub Repository under the Branch
PROG6212_POE_Final_Part.

Please note that should any folder be within the repository appear with a stripped outline (excluded from Project) to right-click and include in Project as this shouldn't be happening (some peers reported this happening, fixes were but should it happen again Please just right-click and click Include in Project.

Please note that a simple update-database in the Package Manager Console should implement the Database to the Project.

Feedback Changes

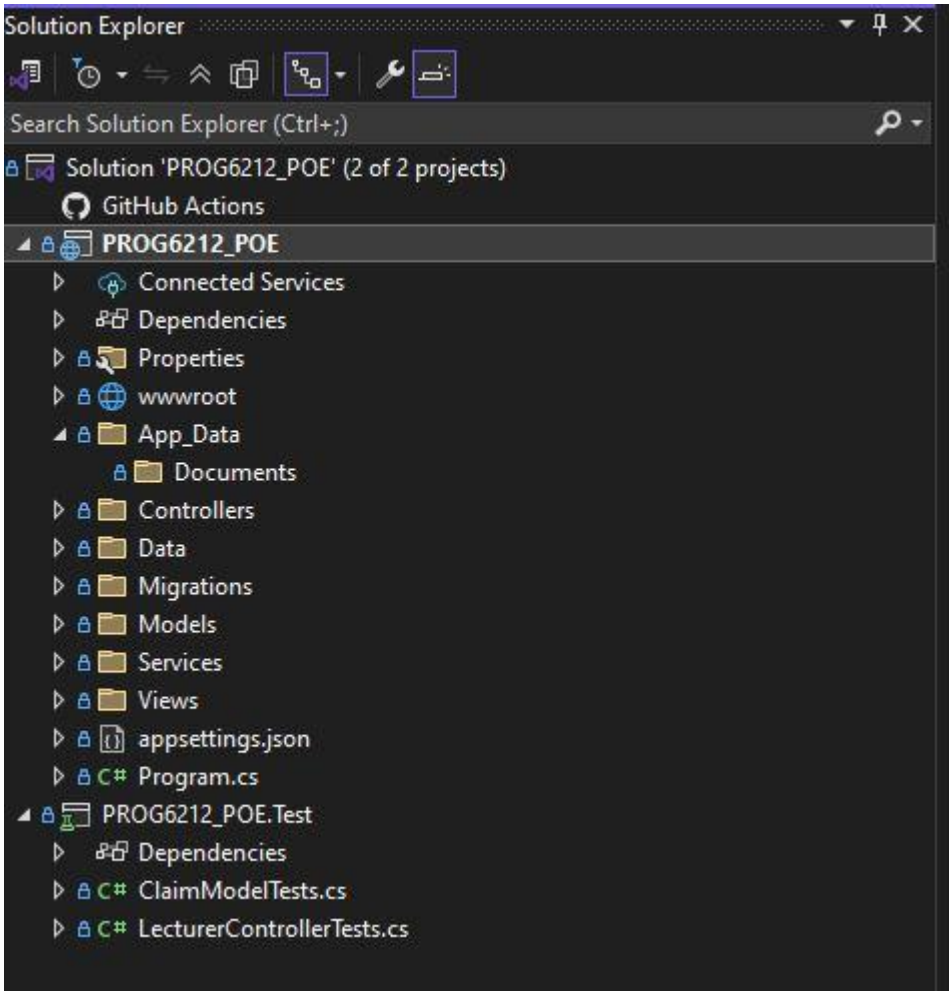

The Lecturer's Feedback as an Image

Programming 2B [Rubric]						PROG6212
Student Name & Number	Swile, Liam ST10438679			Obtained Percentage:		82.0%
Group	4					
Part 2	Levels of Achievement				Result	Feedback
	Poor	Developing	Good	Excellent		
	Score Ranges Per Level					
Lecturers' Claim Submission: Implementation of Feature	0 - 9 The feature is not implemented or does not function as expected, lacking essential functionality.	10 - 14 The feature is implemented but with some flaws or missing elements, impacting usability or functionality.	15 - 17 The feature is implemented effectively, meeting basic requirements and functioning adequately.	18 - 20 The feature is implemented exceptionally well, exceeding basic requirements and enhancing usability or functionality significantly.	20	
Programme Coordinators and Managers' View: Design of View	0 - 9 The design of the view for coordinators and managers is unclear or disorganised, making it difficult to verify claims.	10 - 14 The design of the view is somewhat clear but lacks organisation or user-friendly features.	15 - 17 The design of the view is clear and organised, facilitating easy verification of claims.	18 - 20 The design of the view is highly intuitive and well-structured, enhancing the verification process significantly.	19	> It is suggested that the indicators on each claim should have a different colour depending on their status. For example, when a coordinator sees a "Pending" claim, the text should be in orange. See snippet on right.
Lecturers' Document Upload: Feature Implementation	0 - 9 The document upload feature is missing or does not work properly, failing to allow lecturers to upload supporting documents.	10 - 14 The document upload feature is partially implemented or has some functionality issues.	15 - 17 The document upload feature is implemented effectively, allowing lecturers to upload documents with ease.	18 - 20 The document upload feature is implemented exceptionally well, providing a seamless experience for lecturers and ensuring secure storage of uploaded documents.	14	Ensure safer storage by saving uploaded files outside the publicly accessible wwwroot directory; encrypting them before saving; and saving them only through an authorised, access-controlled download action.
Lecturers' Document Upload: Error Handling and Display	0 - 4 Error handling is nonexistent or ineffective, leading to frequent crashes or incorrect information display.	5 - 7 Error handling is rudimentary, with limited effectiveness in catching and handling exceptions.	8 - 9 Error handling is implemented effectively, catching most exceptions and displaying meaningful error messages.	10 Error handling is implemented exceptionally well, ensuring the application remains stable and responsive even in the face of errors or exceptions.	10	
Claim Status Tracking: Implementation of Tracking System	0 - 4 The tracking system for claim status is not implemented or does not update accurately, leading to inconsistencies in status representation.	5 - 7 The tracking system is partially implemented, with some inaccuracies or delays in status updates.	8 - 9 The tracking system is implemented effectively, updating claim status reasonably accurately and promptly.	10 The tracking system is implemented exceptionally well, providing precision and reliability and real-time and accurate updates on claim status.	10	
Consistency and Reliability: Unit Testing and Error Handling	0 - 4 Unit testing is not conducted, or error handling mechanisms are insufficient, leading to inconsistent or unreliable application behaviour	5 - 7 Unit testing is conducted to some extent, but errorhandling mechanisms are limited in effectiveness.	8 - 9 Unit testing is conducted effectively, covering key functionalities, and error handling mechanisms are adequate.	10 Unit testing is conducted comprehensively, covering all critical functionalities, and error handling mechanisms are robust, ensuring consistent and reliable application behaviour.	4	Where is your unit test project in repo?
Version Control: Commit Frequency and Descriptive Messages	0 - 4 2 Commits are infrequent, and commit messages lack clarity or description of changes.	5 - 7 5 Commits are somewhat frequent, but commit messages may lack clarity or detail.	8 - 9 7 Commits are reasonably frequent and commit messages to provide clarity and detail regarding changes.	10 10 Commits are frequent, and commit messages are clear, descriptive, and informative, demonstrating excellent version control practices.	5	5 Commits somewhat frequest, but commit messages lack descriptive detail. Please make regular commits during development.
Please put the link of your video in the ReadMe file for Part 3.				Total(100):	82	

Changes made to the Program:

- Colour Coordination was added to all views involving the Claim Status to add more readability and present Clear Information.
- The storage folder was moved to a Document folder within the App_Data folder which is within the Project PROG6212_POE (as seen in the image below) and securing methods were added to prevent unauthorized access to files.

- Unit Tests were checked and have been believed to fixed in properly included in the GitHub Repository (tested by fellow Students).
- All commits made for Part 3 have been more descriptive in their messages and explanatory in the changes.

AI Usage Disclosure

Section: GUI/UI elements

AI Tool: Claude AI

Intention: The intention was to fast-track creation of GUI and UI elements to match the rest of the views in a timelier manner as well as generate some code that took the previous code as base and changed elements to what was required.
